

Piezotome Cube

The Piezotome Cube is the latest generation in ultrasonic bone surgery and extraction devices. Because of the ultrasonic motion of the handpiece, it will not cut soft tissue significantly reducing swelling and preserving unaffected tissue. Ultrasonic motion allows for cleaner cuts in bone and faster healing.

The Piezotome Cube has a wide range of tips for both Maxillofacial surgery and tooth extraction. Extra-long tips available for larger canines help pulverize periodontal ligament making for easier, cleaner, and less traumatic extractions.

- Up to 50% less swelling
- Water cooling to prevent burning
- Reduced hand fatigue
- Faster patient recovery
- Less bleeding in the operatory
